PROCESS

Our preserved moss and plants are carefully collected from natural environments and our greenhouses to ensure the highest quality. All plants and mosses brought to our factory are meticulously cleaned and purified from any foreign substances.

The stabilization process preserves the natural appearance and texture of plants and mosses while eliminating the need for water and maintenance. All materials used in this process are harmless to human and pet health.

Stabilized moss and plants are enhanced aesthetically by being colored with natural dyes.

PACKING

We place great importance on the packaging process to ensure that our preserved plant products reach our customers in the best possible condition. All the materials we use in this process are recyclable and environmentally friendly. Our products are carefully packaged in completely sealed boxes, ensuring they are protected from damage during transport and storage. For bulk purchases, we use pallets to further enhance the security of our products. This prevents the boxes from coming into contact with the ground and protects them from external factors. Each box is labeled with a barcode, making it easy for our customers to identify their products.

HOW TO SUSTAIN PRESERVE MOSS WALL ART

GWM performs the preservation process on carefully selected moss and flowers with a special formula developed after years of research. The preservation process is designed to maintain the natural structure and color of the plants at the highest level. This process ensures that the plants retain their softness and natural appearance for a long time. These preserved natural plants can remain fresh for years without needing water or sunlight. They do not require any special maintenance.

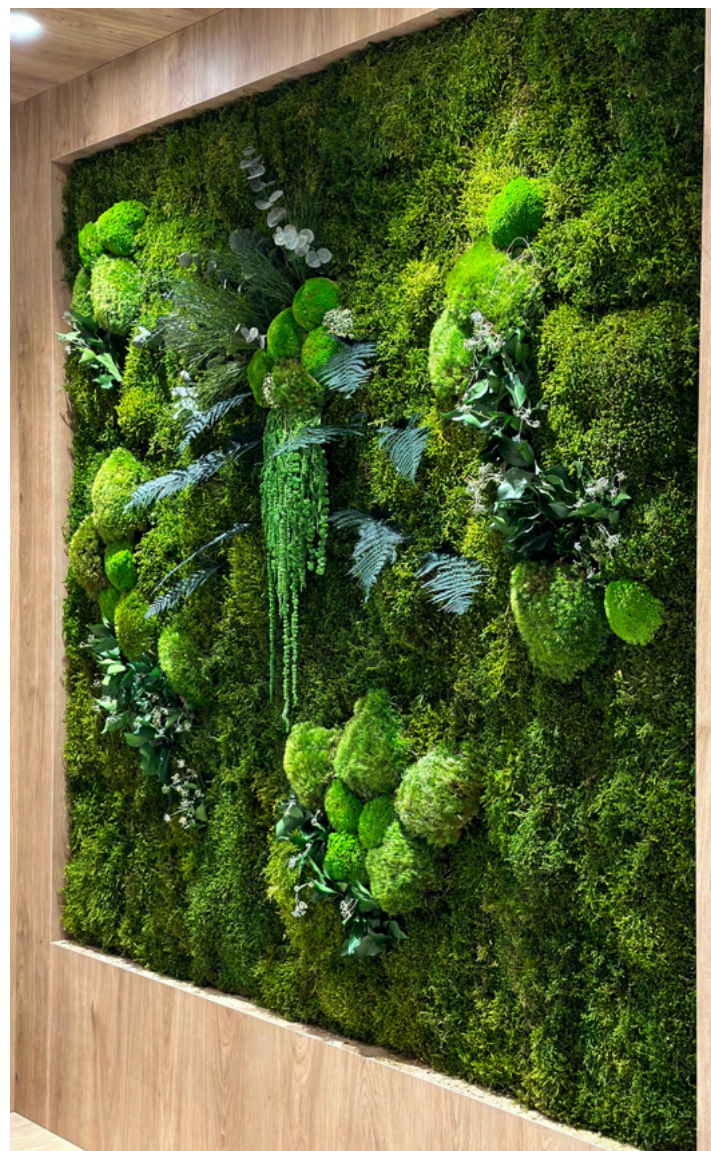

With these maintenance-free properties, they offer a significant advantage for use in many spaces. Our products are harvested when the plants are at their most vibrant, and thanks to our preservation formula, they retain their brightness and freshness as on the first day. GWM's preservation formula allows you to use plants and mosses for years without compromising their beauty and freshness. Our formula stabilizes natural plants without any plastic-based components; therefore, they are in the frozen state of real plants.

INSPIRATION

Bringing nature into your living spaces, we create a more natural and peaceful atmosphere with our decorative solutions. From the initial design phase to installation and after-sales support, customer satisfaction is our priority at every step. Whether you want to create a natural atmosphere in a corner of your home or foster an eco-friendly and innovative vibe in your workplace, we always provide solutions tailored to you and your space. Using our preserved products, you can create a variety of designs, and to experience the calming effect of nature, you can choose a maintenance-free small plant corner or a large green wall. We've compiled some of our projects for you to draw inspiration from.

ADVANTAGES OF PRESERVED MOSS & PLANTS

1. Low Maintenance:

- They do not require water, sunlight, or fertilization.

2. Long-Lasting:

- They retain their natural freshness and brightness for years.
- Their durable structure allows for long-term use.

3. Aesthetic and Decorative:

- They offer a natural and vibrant appearance.
- Available in various colors and textures, they provide diverse decoration options.

4. Eco-Friendly:

- Made from 100% natural and sustainable materials.
- They do not contain plastic-based components and do not harm the environment.

5. Health and Safety:

- Safe for both humans and pets, they do not pose any health risks upon contact.
- They do not cause allergic reactions.

HOW TO SUSTAIN PRESERVE MOSS WALL ART

- Sun and water contact should be avoided.
- There should be 50- 80% humidity in the environment.
- They do not need any pruning.
- Dust should be removed once every few months.

ABOUT US

Green Wall Moss has been providing services in moss walls, vertical gardens, environmental designs, and landscape decorations since 2012. Our expert designers offer sustainable solutions that bring nature into your living spaces, delivering long-lasting decorative projects that best reflect your concept.

Compared to fresh-cut flowers, preserved flowers, and plants have a much lower carbon footprint due to their lower cost and longer lifespan.

Our expert team approaches each project individually, creating creative and aesthetically valuable solutions tailored to client needs and the characteristics of the space.

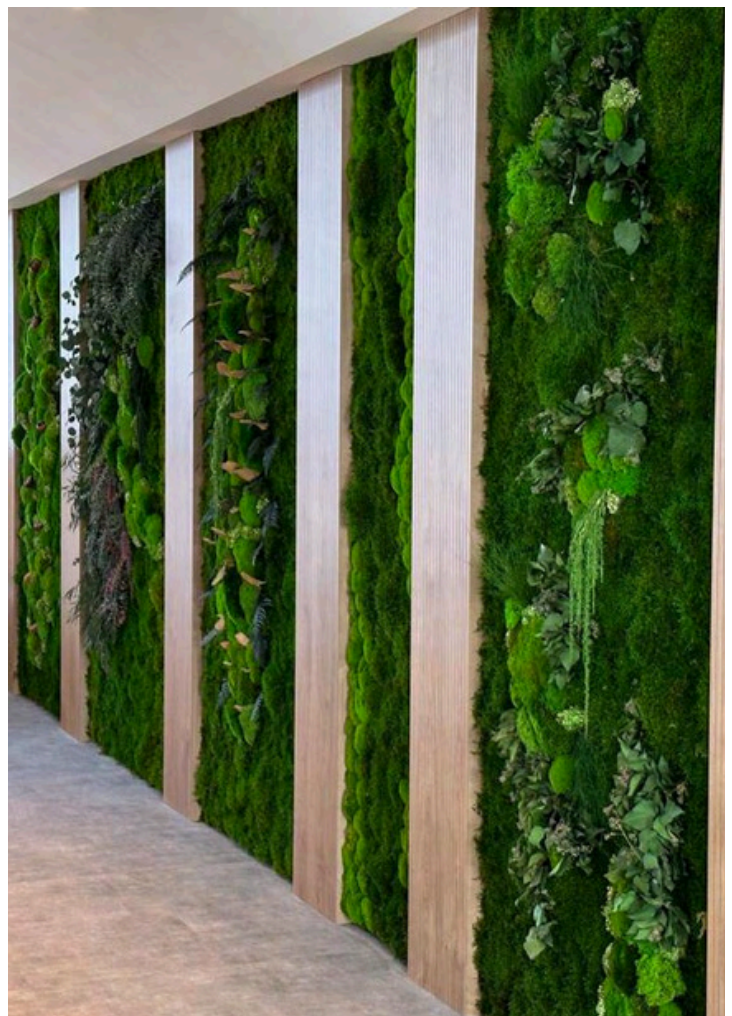

We deliver our carefully crafted products from our workshop to every region of the world.

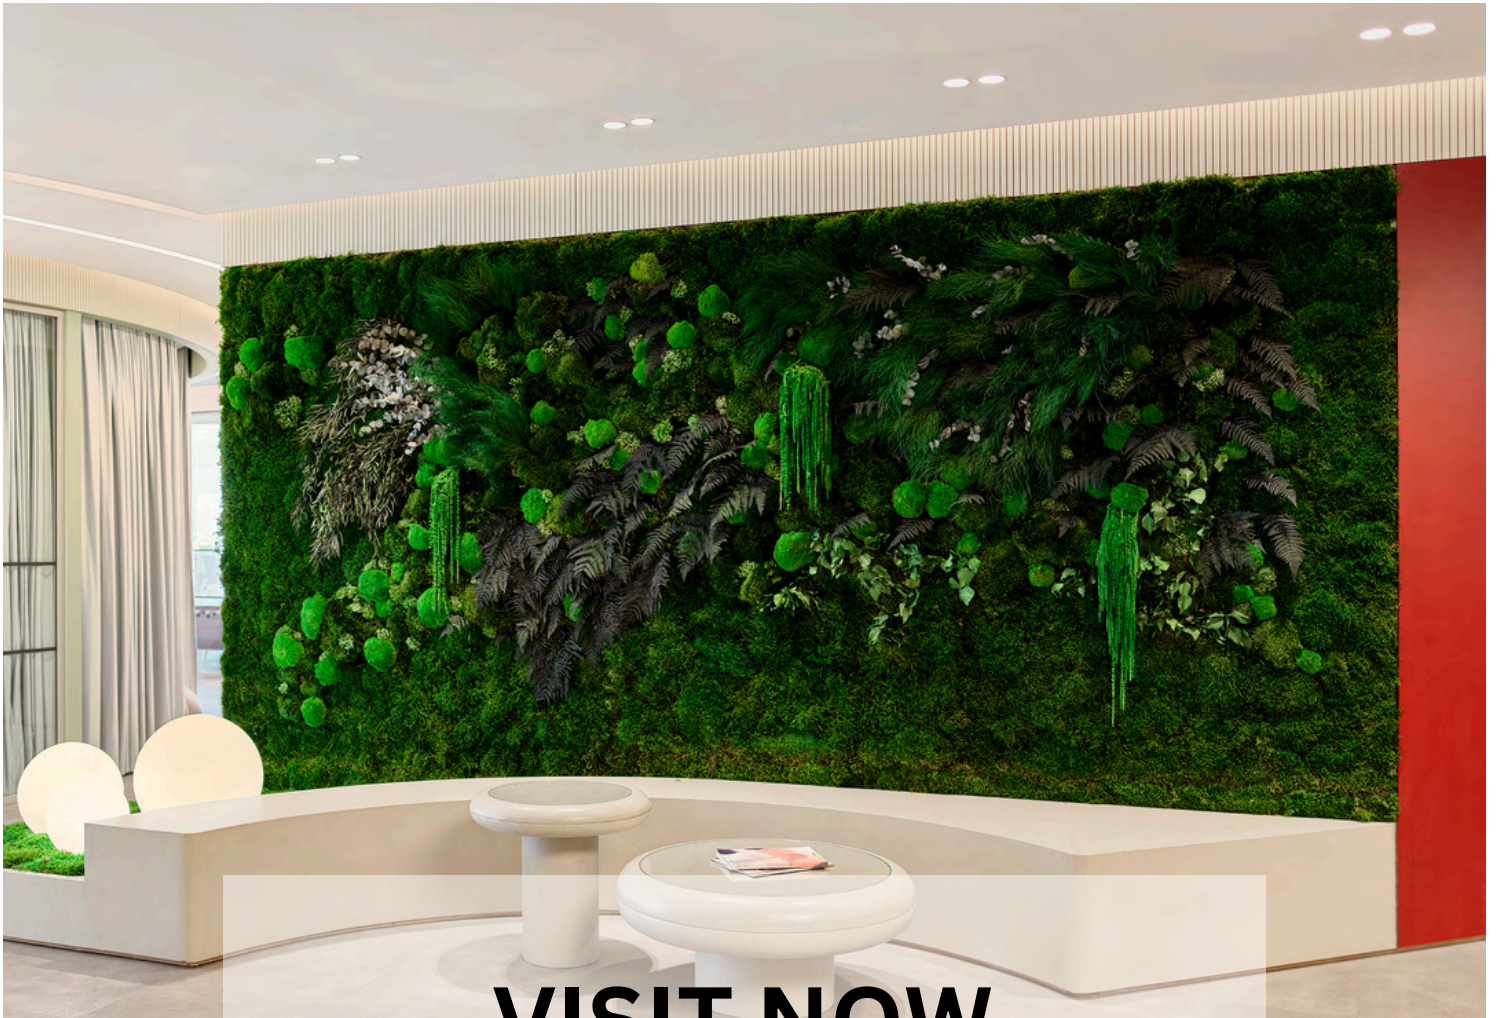

Vertical gardens, with their aesthetic appearance, are an example of modern and sustainable designs today.
